@ahmedhanyasin

SKILLS

Languages: **Python**

Frameworks & Libraries: **PyTorch, OpenCV, RKNN Toolkit, Hugging Face**

Edge & Deployment: **NPU (Rockchip RK3588), INT8 Quantization, ONNX, Orange Pi**

Computer Vision: **Object Detection, Segmentation, Multi-Task Learning, Anomaly Detection, OCR, VLMs**

EDUCATION

Ankara University

Expected Graduation: 2028

Master of Science: Informatics

Gebze Technical University

Bachelor of Science: Electronic Engineering

PUBLICATION

A Comparative Study of Multi-Task Learning Approaches on Disjoint Datasets, IEEE SIU 2025 – Signal Processing and Communications Applications Conference

SUMMARY

Machine Learning Engineer with 5 years of experience specializing in **Computer Vision**, with a background in Electronic Engineering. Proven track record of taking **deep learning** models from research to production, including edge deployment on NPU hardware with real-time performance on live camera systems.

EXPERIENCE

TyX Technologies (Ankara, Türkiye)

Machine Learning Engineer / 2021 - Present

Multi-Attribute Vehicle Detection on Edge Devices

- Designed a single-stage YOLOv9 model jointly detecting vehicles, license plates, and ADR plates while classifying color, type, and brand across 46 classes in one inference pass (90.9% mAP@0.5).
- Deployed via ONNX → RKNN with INT8 quantization on RK3588 NPU at 25–30 FPS; in production on 4 live camera streams.

Multi-Task Learning for Fire Classification and Foreign Object Segmentation (published at IEEE SIU 2025)

- Extended an unsupervised anomaly-segmentation model with a fire/smoke classification head via multi-task learning on disjoint datasets.
- Benchmarked five training strategies; best achieved 95.9% accuracy while preserving segmentation performance (IoU 0.52 vs. 0.53).

License Plate Recognition for PTZ Cameras

- YOLO-based detection integrated with OCR (EasyOCR, Tesseract), optimized for PTZ camera characteristics.

Additional work includes fog density estimation and road condition classification, VLM benchmarking (image captioning, VQA), and super-resolution evaluation (PSNR/SSIM).

Meteksan Defence (Ankara, Türkiye)

Intern / Feb 2021

- Comparative evaluation of YOLOv3 and YOLOv4 architectures for custom object detection.
