

OZAN AHMET DEDE

Computer Engineer | Software Development & Embedded Systems

Adana, Türkiye | Open to relocation | +90 501 555 87 58 | dedeozanahmet@gmail.com
linkedin.com/in/ozanahmetdede | github.com/OAdede

EDUCATION

Süleyman Demirel University

2021 - 2026

B.Sc. in Computer Engineering | Isparta, Türkiye

EXPERIENCE

Adana Commodity Exchange (ATB)

Jul 2026 - Aug 2026

Software Development Intern | Adana, Türkiye

Kampüsüm | Next.js, TypeScript, Prisma, PostgreSQL, Auth.js | [GitHub](#) | [Live Demo](#)

- Built and deployed Kampüsüm, a mobile-friendly student platform with campus feeds, schedules, events, communities, resource sharing, and messaging. The platform includes a catalog of 227 institutions.
- Used AI coding tools under an engineer's guidance, reviewed generated code, and verified changes with TypeScript checks, 133 automated tests, and GitHub Actions.

Information and Communication Technologies Authority (BTK)

Jul 2025 - Aug 2025

Frontend Team Lead (Intern) | Ankara, Türkiye

Restaurant Management System | React, Vite | [Team Repo](#) | [Frontend Repo](#)

- Led the frontend team in an 18-person internship project and coordinated development of the React/Vite restaurant management interface.
- Combined work from several team members, resolved Git merge conflicts, and brought the order, table, stock, personnel, and reporting screens into one application.

SELECTED PROJECTS

GeoGuardian | Real-Time Earthquake Monitoring

2026

JavaScript, FastAPI, Leaflet, globe.gl | [GitHub](#) | [Live Demo](#)

- Built and deployed a mobile-friendly earthquake dashboard using USGS data. Added 2D and 3D views, time and magnitude filters, shareable links, and automatic updates every two minutes.
- Added a FastAPI service and a direct USGS fallback so the dashboard can still load data if the backend does not respond within eight seconds.

Smart Helmet | IMU-Based Safety Prototype

2026

ESP32, MPU6050, FastAPI, Streamlit, Python, Random Forest | [GitHub](#)

- Built a camera-free smart helmet prototype that sends motion data from an ESP32 and MPU6050 to a FastAPI service and shows four helmet states in a live Streamlit dashboard.
- Collected real sensor data, tested a Random Forest model, and found that helmet orientation affected prediction accuracy.

TECHNICAL SKILLS

Programming: TypeScript, JavaScript, Python, Java, C/C++

Web & data: Next.js, React, FastAPI, REST APIs, Prisma, PostgreSQL, Auth.js

Embedded & tools: ESP32, Arduino, MPU6050, sensor integration, Git/GitHub

Languages: Turkish (native), English (intermediate technical reading; basic speaking)
