■ Experience

Microsoft – Turkey (Intern, July–September 2024)

- I created three separate AI/ML projects: credit card fraud detection, stock price analysis, and analysis of ancient languages, and presented these projects to my internship advisor.

■ Projects

- Dynamic Web Scraper — Python Package (PyPI Published)
- I developed a dynamic scraping system that automatically adapts to every e-commerce site.
- Features:
 - Dynamic HTML selector detection
 - Anti-bot simulation
 - Proxy rotation & failover
 - Behavior-based extraction
 - Auto-retry & fallback
- I created releases v1.0.0 → v1.0.1 on PyPI.
- I set up a clean architecture + modular core + logging + error-handling system.
- Autonomous Car Sharing System: Finalist at TÜBİTAK 2209-A and Teknofest competitions.
- Social Media Platform: Cross-platform mobile app using React Native (Graduation project).
- AI Projects:
 - US stock price prediction
 - Credit card fraud detection
 - Deciphering unknown ancient alphabet via AI models
