ABOUT ME

Computer Engineering student (GPA: 3.61) with experience in optimization, embedded systems, and software development projects. I enjoy understanding how systems work end to end and turning that understanding into clean, efficient solutions.

In team settings, I place strong emphasis on communication and learning together. I actively seek feedback to improve both my technical contributions and collaboration skills. Through project work, I have contributed to planning, coordination, and shared decision-making, helping teams deliver work in an organized and meaningful way. I am motivated by opportunities where I can grow technically, work closely with peers, and contribute to real technical challenges.

PROJECTS

SustainSeed.ai

AI-assisted gamified app that grows digital trees from everyday sustainable actions.

Embedded Home Automation System

Real-time PIC Embedded System using Assembly & UART.

EDUCATION

ESKISEHIR OSMANGAZI UNIVERSITY

(2022 - Present)

Bachelor of Science :
Computer Engineering

GPA: 3.61

EXPERIENCE

TÜBİTAK 1004 Program - Research Scholar

[Eskisehir Osmangazi University] | Aug 2025 - April 2026

- Actively contributed to a research project focused on traffic analysis and route optimization
- R&D on intelligent routing and autonomous management for electric vehicle fleets.
- Integration of a DDQN-based route optimization module and real-time adaptation.
- Map-based monitoring and scenario testing via FastAPI microservices and a React-Leaflet interface.
- Analyzed and forecasted large-scale traffic networks using GNN (Graph Neural Networks) and GCN (Graph Convolutional Networks).
- Implemented graph embedding techniques for efficient representation and processing of network data.

SKILLS

Programming:

C, C++, Python, C#, Assembly (PIC)

Embedded Systems:

PIC microcontrollers, interrupt-based systems, sensor integration

AI & Data:

Graph Neural Networks (GNN, GCN),
Deep Reinforcement Learning (DDQN),
graph-based data modeling, SQL

Systems & Tools:

FastAPI, Git, React-Leaflet

Methodologies:

Agile / Scrum, UML-based software design

CERTIFICATES

NVIDIA | 2025 - 2026

- Applications of AI for Predictive Maintenance
- Rapid Application Development with Large Language Models (LLMs)
- Building Agentic AI Applications with LLMs

GOOGLE | 2025

- Google Project Management Professional Certificate
- Inspect Rich Documents with Gemini Multimodality and Multimodal RAG Skill Badge

Yapay Zeka ve Teknoloji Akademisi | 2025

- Certificate of Completion - Web Application Development
- Certificate of Completion - Entrepreneurship

LANGUAGES

English: Professional Working Proficiency

Turkish: Native
