EDUCATION

Bachelor of Science in Computer Engineering

2022 – 2026

Suleyman Demirel University (SDU), Isparta

WORK EXPERIENCE

Software Engineering Intern | Bestnet Greensoft Technology

- **Full-Stack Development Support:** Contributed to both backend logic and frontend implementation, focusing on the integration between server-side data and user-facing features.
- **UI/UX Design & Prototyping:** Created wireframes and interactive prototypes using Figma, ensuring visual designs were functional and ready for technical implementation.
- **Backend & Database Management:** Assisted in developing and maintaining backend services and database structures to improve overall system reliability.
- **Project Coordination:** Actively participated in project tracking and documentation throughout the development lifecycle to ensure project goals were met.
- **Technical Problem Solving:** Collaborated with the development team to identify system bottlenecks, troubleshoot bugs, and implement UI improvements.

IT Intern | Fresenius Medical Care

- **IT Support & Troubleshooting:** Provided technical support for hardware, software, and end-user issues, ensuring minimal disruption to daily operations.
- **System Administration Support:** Assisted with software installation, system configuration, updates, and maintenance across corporate workstations.
- **IT Infrastructure Support:** Contributed to the maintenance of enterprise IT infrastructure, including user account management and device setup.
- **Technical Issue Resolution:** Worked closely with the IT team to diagnose and resolve technical incidents while adhering to corporate IT policies and procedures.
- **Operational Support & Collaboration:** Supported daily IT operations and collaborated with cross-functional teams to ensure reliable and efficient technology services.

PROJECTS & EXTRA-CURRICULAR ACTIVITIES

Smart Expiration Tracking & AI Campaign System (Python, Node.js, AI)

- Engineered a full-stack smart inventory management system using Python and Node.js, designing the backend architecture, REST API layer, and relational data models used to automate expiration date analysis, detect critical products, and streamline day-to-day inventory operations.
- Integrated AI-driven content generation to automatically produce promotional campaign posters for near-expiry products, enhancing operational efficiency, reducing product waste, and supporting data-driven sales strategies for the business.

NewsPilot AI (Python, PySide6, Gemini, Sentence Transformers, NLP, FFmpeg)

- Developed an AI-powered PySide6 desktop application that collects, filters, clusters, and analyzes news from multiple regional sources, coordinating a multi-stage pipeline across fetching, deduplication, and summarization.
- Built an automated pipeline using Sentence Transformers for semantic clustering, Gemini for summarization and script generation, and FFmpeg with text-to-speech to produce narrated, presenter-style video news content end to end.

WorkScan | QR-Based Staff Tracking System

- Developed a workforce management solution using QR code technology for secure employee check-in/out, replacing manual attendance logging with an automated, scannable workflow.
- Implemented an automated tracking system for shifts and working hours, backed by a real-time management panel that lets administrators monitor attendance and generate reports on demand.

ChefMate | Recipe Sharing Platform

- Designed and developed a mobile application for discovering and sharing recipes, focusing on a clean, user-friendly experience from browsing through to cooking.
- Integrated features for step-by-step instructions, ingredient management, and a random recipe suggestion engine to boost discovery and keep users engaged with the app.

CryptoApp | Cryptocurrency Tracker

- Built an Android application that provides real-time cryptocurrency price tracking across multiple coins, with a focus on fast, reliable updates for active traders.
- Utilized Retrofit and RxJava for efficient, asynchronous data fetching from market APIs, and RecyclerView for smooth, dynamic display of live price data.

catchTheKenny | Mobile Game

- Designed and implemented a basic interactive game using Kotlin, focusing on mobile UI logic and event handling.

EXTRA-CURRICULAR ACTIVITIES & LEADERSHIP

- InspireHER Mentoring Program (ForInvest) (04/2025 – 09/2025).
- **Team Management:** Member of the SDU Computer Community Project Team.
- **Event Participation:** Solana Allstars Turkey, Microsoft Day, and 2nd Pibex National Idea Marathon (2024).

SKILLS

Languages

Turkish (Native)
English (Proficient user)

Key Skills

- Kotlin
- Python
- JavaScript (Node.js)
- SQL
- Jetpack Compose
- Android Studio
- PySide6
- CustomTkinter
- REST APIs
- PostgreSQL
- Database Design
- Figma (Prototyping & UI Design)
- Git / GitHub
- Postman

INTERESTS

- **Artificial Intelligence:** Exploring AI integration in mobile and desktop applications.
- **Software Development:** Continuous learning in Kotlin and Python frameworks.
- **UI/UX Design:** Passionate about creating user-centered designs and interactive interfaces.
- **Travel:** Interested in exploring new cultures and environments.
